TAB,TAB,ATTACK||CYLAB ACADEMY||EASY

Name:Aarush Viswanath/Avcalamur7@proton.me
DATE:7/11/2026
CATEGORY:General Skills(II)
Key skills:File navigation;File Execution

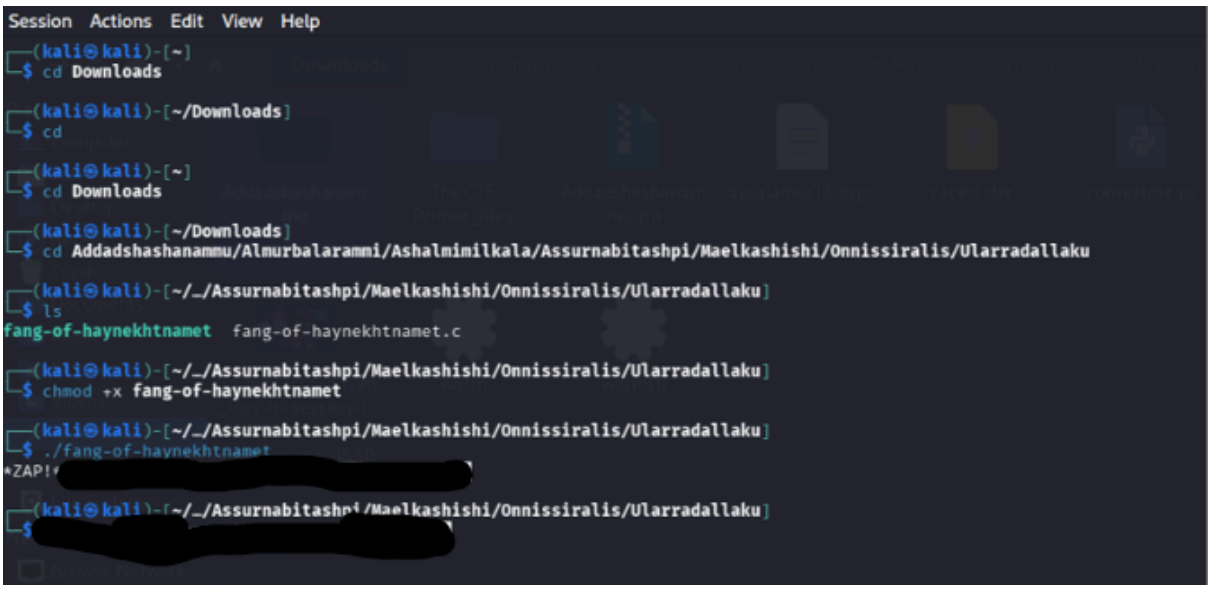

Summary:
Tab,Tab,attack is an easy level challenge on Cylab academy(formerly picoCTF) where the user is required to unzip a large file with several directories and find an executable file containing the flag.

Enumeration:
1.

As seen in the image above,we are to download a zip file,unzip it and find the executable. What I did was I downloaded the file and manually unzipped it in folders(though better alternatives do exist which I will discuss below).

2.Now using my personal Kali Linux Terminal(I didn't use the given webshell in CyLab),I navigated to Downloads via cd Downloads
From there it was simple,using “tab” to navigate to each file deeper and deeper until I reached the executable.

As seen here we navigated to the executable hidden deep within the file And executed the file(before applying chmod +x <filename> which is a command which is used to make an existing .exe file executable i.e allowing permission for a program to be executed by the terminal)

LESSONS LEARNED:

As stated above in step 1,I didn't Unzip the folder in webshell as intended,the alternative command is unzip <folder.zip> which is more faster and useful for engaged operations.While in this CTF,unzipping a folder manually may have worked,I made a note to ensure to utilize this command. While this challenge seems trivial especially experienced professionals who use linux in day to day operations,many often don't utilize shortcuts like tab to navigate which while it might seem small ,will actually lose a lot of time and effort overall especially in time sensitive operations and competitive CTFs.The purpose of this Challenge was to inculcate the user in the “tab” reflex which is very important in the infrastructure and cybersecurity domain.
